Receipt is acknowledged of the Amendment filed February 7, 2005.

*Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claim 10 is rejected under 35 U.S.C. 102(e) as being anticipated by Ye et al. (US 6,529,045 B2).

Ye et al. discloses, in Fig. 3, a dynamic logic circuit having an output (OUTPUT) and a complementary output (output of 303) comprising:

a dynamic node (304);

precharge circuitry (N1) coupled to said dynamic node for precharging the dynamic node to a logic one during a precharge cycle of a clock signal (/CLK);

a logic tree (PULL-DOWN NMOS TREE) coupled to said dynamic node for evaluating said dynamic node to a logic one or a logic zero in response to combinations of logic states of plurality of logic inputs (in 1 - in N) coupled to said logic tree during an evaluation cycle of said clock signal;

Art Unit: 2819

static logic circuitry (STATIC CMOS) for latching logic states of said dynamic node and holding said logic states during said precharge cycle of said clock signal, wherein said static logic circuitry generates said output and said complementary output; and

a keeper circuit (N2) having a power supply terminal coupled to a power supply voltage (Vcc), a keeper input (gate of N2) coupled to said complementary output and a keeper output (drain of N2) coupled to said dynamic node, wherein said keeper output reinforces a logic one state on said dynamic node only when said dynamic node evaluates to the logic one state and said output is the logic one state before transitioning to the logic zero state.

#### ***Allowable Subject Matter***

Claims 1-9 are allowable over the prior art.

Claim 11 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

#### ***Response to Arguments***

Applicant's arguments with respect to claim 10 have been considered but are moot in view of the new ground(s) of rejection.

#### ***Conclusion***

Art Unit: 2819

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
